

# BRAHMS Run5 pp Status

- Physics data taking with Spectrometer triggers since Sunday
- Main physics goal: Single spin transverse asymmetry at high-x (blue)
  - To meet the physics goal:  $5\text{pb}^{-1}$  (delivered)
  - Higher luminosity (intensity + uptime) with blue polarization  $> 45\%$  needed
- No plan for data taking at 205GeV: no meaningful physics results expected from 1-2 days of running
